Overview
Virtual reality can be used to enhance student learning and engagement. VR education can transform the way educational content is delivered; it works on the premise of creating a virtual world — real or imagined — and allows users not only see it but also interact with it. Being immersed in what you’re learning motivates you to fully understand it. It’ll require less cognitive load to process the information.

When students read about something, they often want to experience it. With VR, they aren’t limited to word descriptions or book illustrations; they can explore the topic and see how things are put together.

About the App
360 VR Educator is learning platform where users can

- Create learning experiences for VR environment-(windows app)
  - Create lessons
  - Create chapters inside the lesson and associate it with a 360 image or video
  - Add game elements like panels, portals and audio to the chapters
  - Preview their created lessons
- Experience the created VR content (single-mode)- (android app)
- Connect with other users inside the VR mode and guide the other users-(android app)
Lesson Creation

- VR lessons can be created and modified using lesson creation tool.
- Lessons consist of chapters.
- Chapters are 360 images/videos consisting of interactive elements called game elements.
- Currently the app has 4 game elements as follows:
  - Audio element
  - Panel element
  - Portal element
  - Checkpoint element
Lesson Creator Tool

Game Elements

Game elements are interactive elements augmented to 360 images or videos to immersify the user experience. Here are the four game elements which can be created within a VR lesson.
Audio Element

- Narrations can be added to the scene using audio element.
- Users have to provide the link to .mp3 file in the form of a web link (eg: http://xyz.mp3)

Portal Element

- Portal Elements are used to create links to other chapters in the lesson.
- User can navigate to another chapter by click on the portal button within the chapter.
Panel Element

- Panel element is used to add interactive multimedia content to scene like texts, buttons, images, videos, videos from youtube.
- Teachers can annotate the scene or create an interactive quiz using these elements.

Checkpoint Element

- Checkpoint element can be used to draw attention to important points in the lesson.
- Teachers can view the list students who have visited the checkpoint element.
- Checkpoint elements can sequentially guide the user through the lesson.
- This game element is used to connect, interact and guide other users.
Connect, Interact and Guide Students

Teachers can create checkpoint element to be viewed in sequential order. Students have to click on “follow the alert” button to be guided towards the checkpoint.

Once the student clicks on “follow the alert”, he/she will be guided towards the checkpoint by a white color arrow as shown in the above figure.

Experience the content on PC and Android
# 360 VR Educator Vs Google Expeditions

<table>
